

Our visit to America in the beginning of 2010 left us a deep impression, which appears quite often in front of my eyes. The participation of the students, parents and teachers in the MMUN, the serious attitudes of the students, and their sense of responsibility made us see the hope of the future.

We do believe the participation of the students from China will mark a new chapter of the activity, opening a window for the students from China to better understand the world as well as presenting themselves. Meanwhile their participation will open a door for the students from other countries to understand China, as well as exhibiting different cultures. Therefore, what we do together is to enhance a better understanding of each other, and to encourage our students to make a preparation to solve the problems we are facing, to create a harmonious world and a bright future. I'm honored to have the opportunity and feel proud to make friends with you.

We have done much work to make all the efforts to lay a good foundation for the MMUN activity in Henan province. The Education Department of Henan province has issued a document particularly to promote the project in the whole province. The first group of teachers to be trained have been selected and got the visa to the USA with your great help. They are ready to set out and will get to New York for the training program in a few days. The following work has been carried out as well. I believe our cooperation is long-term and all sides have a promising future.

*Very Truly yours
